

National Poll Toplines

Methodology

Poll number: pr2007

Interview Dates: April 19, 2020

Sample Population: 1917 registered voters in the United States.

Sample Selection: Scientific online poll - stratified sample of panel respondents.

Weighting Parameters: The sample was weighted based on the U.S. Census Bureau's Voting and Registration Supplement to the Current Population Survey for registered voters in the United States based on age, gender, race, educational attainment, census region, and Hispanic ethnicity.

This topline provides weighted percentages, as well as the unweighted N-size for the total sample. Due to the effects of weighting and rounding, figures may or may not add up to 100%. The standard deviation of the weights was: 0.2242216. The maximum weight was: 1.9601923. The minimum weight was: 0.3773268. 95% of the weights were between 0.4793321, 1.4957711.

Margin of Error: The 95% credibility interval for this survey is +/- 2.3%, which includes the square root of the design effect (DEFT): 1.0248166.

Q14...As you may know, the federal government is considering providing substantial emergency financial assistance to the airline industry, including millions of dollars in grants, loans, and tax rebates. Some argue that any assistance the federal government provides to the airline industry should also require the industry to address climate change and lower emissions, as aviation is a major source of pollution. During the 2009 recession, for example, the auto industry received a government bailout that included provisions for increasing fuel efficiency, which ultimately led to cutting emissions and saving consumers money on fuel spending. Others argue that attaching emissions-reduction conditions on assistance to the airline industry will limit the economic impact of the assistance and place more burdens on the industry as it struggles to survive. An economic crisis is not the time to increase the size of government or focus on other issues like climate change, but rather support companies and stabilize the economy. What do you think? If the federal government provides substantial emergency financial assistance to the airline industry, should it include a requirement to lower emissions, or not?

Q14...As you may know, the federal government is considering providing substantial emergency financial assistance to the airline industry, including millions of dollars in grants, loans, and tax rebates. Some argue that any assistance the federal government provides to the airline industry should also require the industry to address climate change and lower emissions, as aviation is a major source of pollution. During the 2009 recession, for example, the auto industry received a government bailout that included provisions for increasing fuel efficiency, which ultimately led to cutting emissions and saving consumers money on fuel spending. Others argue that attaching emissions-reduction conditions on assistance to the airline industry will limit the economic impact of the assistance and place more burdens on the industry as it struggles to survive. An economic crisis is not the time to increase the size of government or focus on other issues like climate change, but rather support companies and stabilize the economy. What do you think? If the federal government provides substantial emergency financial assistance to the airline industry, should it include a requirement to lower emissions, or not?
