National Poll Results

Methodology

Poll number: pr1912EV-1

Interview Dates: April 16-17, 2019

Sample Population: 1939 registered voters in the United States

Sample Selection: Scientific online poll - stratified sample of panel respondents

Weighting Parameters: The sample was weighted based on the U.S. Census Bureau's Voting and Registration Supplement to the Current Population Survey for registered voters in the United States based on age, gender, race, educational attainment, census region, and Hispanic ethnicity.

Figures may or may not sum to 100% and this is due to the effects of rounding and weighting. Climate Nexus does not normalize results or poststratification weights. The standard deviation of the weights was: 0.2. The maximum weight was: 2.01. The minimum weight was: 0.48. 95% of the weights were between 0.72, 1.48. Each reported N-size is the weighted N-size. Each stratum's N-size may or may not add up to the total N-size for any one specific question, this is due to the effects of rounding and weighting.

Margin of Error: The 95% credibility interval for this survey is +/- 2.2%, which includes the square root of the design effect (DEFT): 1.02.
