Texas Poll Toplines

climatenexus Polling · YALE PROGRAM ON Climate Change Communication · GEORGE MASON UNIVERSITY CENTER for CLIMATE CHANGE COMMUNICATION

Methodology

Poll number: pr1921

Interview Dates: August 20-25, 2019

Sample Population: 1660 registered voters in Texas.

Sample Selection: Scientific online poll - stratified sample of panel respondents.

Weighting Parameters: The sample was weighted based on the U.S. Census Bureau's Voting and Registration Supplement to the Current Population Survey for registered voters in Texas based on age, gender, race, educational attainment, and Hispanic ethnicity. The survey was also balanced to reflect a representative sample of registered voters by media markets across the state (data provided by Aristotle)

Figures may or may not sum to 100% and this is due to the effects of rounding and weighting. The standard deviation of the weights was: 0.1850524. The maximum weight was: 1.5167484. The minimum weight was: 0.4445692. 95% of the weights were between 0.58171, 1.3609218.

Margin of Error: The 95% credibility interval for this survey is +/- 2.4%, which includes the square root of the design effect (DEFT): 1.0169679.

Texas Poll Results

Methodology

Poll number: pr1921

Interview Dates: August 20-25, 2019

Sample Population: 1660 registered voters in Texas.

Sample Selection: Scientific online poll - stratified sample of panel respondents.

Weighting Parameters: The sample was weighted based on the U.S. Census Bureau's Voting and Registration Supplement to the Current Population Survey for registered voters in Texas based on age, gender, race, educational attainment, and Hispanic ethnicity. The survey was also balanced to reflect a representative sample of registered voters by media markets across the state (data provided by Aristotle)

Figures may or may not sum to 100% and this is due to the effects of rounding and weighting. The standard deviation of the weights was: 0.1850524. The maximum weight was: 1.5167484. The minimum weight was: 0.4445692. 95% of the weights were between 0.58171, 1.3609218. For cross tabulations, each reported N-size is the weighted N-size. Each stratum's N-size may or may not add up to the total N-size for any one specific question, this is due to the effects of rounding and weighting.

Margin of Error: The 95% credibility interval for this survey is +/- 2.4%, which includes the square root of the design effect (DEFT): 1.0169679.

Texas Poll Results

Methodology

Poll number: pr1921

Interview Dates: August 20-25, 2019

Sample Population: 1660 registered voters in Texas.

Sample Selection: Scientific online poll - stratified sample of panel respondents.

Weighting Parameters: The sample was weighted based on the U.S. Census Bureau's Voting and Registration Supplement to the Current Population Survey for registered voters in Texas based on age, gender, race, educational attainment, and Hispanic ethnicity. The survey was also balanced to reflect a representative sample of registered voters by media markets across the state (data provided by Aristotle)

Figures may or may not sum to 100% and this is due to the effects of rounding and weighting. The standard deviation of the weights was: 0.1850524. The maximum weight was: 1.5167484. The minimum weight was: 0.4445692. 95% of the weights were between 0.58171, 1.3609218. For cross tabulations, each reported N-size is the weighted N-size. Each stratum's N-size may or may not add up to the total N-size for any one specific question, this is due to the effects of rounding and weighting.

Margin of Error: The 95% credibility interval for this survey is +/- 2.4%, which includes the square root of the design effect (DEFT): 1.0169679.
